### Determining the value for [DISTANCE] and [GAIN] of [DTA SETTINGS]

If you specify the distance from the center of the currently set listening position to every speaker, the delay time will be automatically computed and set.

- 1 Determine the center of the currently set listening position as the reference point.
- 2 Measure the distances from the reference point to the speakers.
- 3 Calculate the differences between the distance of the furthest speaker (rear speaker) and other speakers.
- 4 Set the [DISTANCE] calculated in step 3 for individual speakers.
- 5 Adjust [GAIN] for individual speakers.

Example: When [FRONT ALL] is selected as the listening position

\*1 Before making an adjustment, select the speaker:

When 2-way crossover is selected:

**FRONT LEFT/FRONT RIGHT/REAR LEFT/REAR RIGHT/SUBWOOFER**

– [REAR LEFT], [REAR RIGHT] and [SUBWOOFER] is selectable only if a setting other than [NONE] is selected for [REAR] or [SUBWOOFER] of [SPEAKER SIZE]. (→ 22)

- Be sure to ground this unit to the car's chassis again after installation.

### ▲ Caution

- For safety's sake, leave wiring and mounting to professionals. Consult the car audio dealer.
- Install this unit in the console of your vehicle. Do not touch the metal parts of this unit during and shortly after use of the unit. Metal parts such as the heat sink and enclosure become hot.
- Do not connect the ⊖ wires of speakers to the car chassis or Ground wire (black), or connect them in parallel.
- Connect speakers with a maximum power of more than 50 W. If the maximum power of the speakers is lower than 50 W, change the [AMP GAIN] setting to avoid damaging the speakers. (→ 20)
- Mount the unit at an angle of less than 30°.
- If your vehicle wiring harness does not have the ignition terminal, connect Ignition wire (red) to the terminal on the vehicle's fuse box which provides 12 V DC power supply and is turned on and off by the ignition key.
- Keep all cables away from heat dissipate metal parts.
- After the unit is installed, check whether the brake lamps, blinkers, wipers, etc. on the car are working properly.
- If the fuse blows, first make sure the wires are not touching car's chassis, then replace the old fuse with one that has the same rating.

### Basic procedure

- Remove the key from the ignition switch, then disconnect the ⊖ terminal of the car battery.
- Connect the wires properly.  
See Wiring connection. (→ 32)
- Install the unit to your car.  
See Installing the unit (in-dash mounting). (→ 31)
- Connect the ⊖ terminal of the car battery.
- Press **SOURCE**-⏪ (for KD-R981BT/KD-R784BT/KD-R782BT) or **SRC**-⏪ (for KD-R889BT/KD-R881BT) to turn on the power.
- Detach the faceplate and reset the unit. (→ 3)

## INSTALLATION/CONNECTION

### Installing the unit (in-dash mounting)

### Part list for installation

#### (A) Faceplate

## INSTALLATION/CONNECTION

### Wiring connection

When connecting to an external amplifier, connect its ground wire to the car's chassis to avoid damaging the unit.

#### If your car does not have an ISO terminal

We recommend installing the unit with a commercially available custom wiring harness specific for your car and leave this job to professionals for your safety. Consult your car audio dealer.
